

Our clients need energy price protection.

We can help! In this energy market, with rates climbing at an unprecedented pace, lock into as long a term agreement as possible. For example today a 60 month term agreement will get you the best rates. With longer term agreements, discounts can be as much as 50% lower than a 12 month term! When going long, if rates drop, we will renegotiate your agreement.

We will go to your supplier to LOWER your rate. And get another agreement from them without any termination fees. This program is called 'blend and extend energy protection', to lower fixed energy rates if markets go down.

We service all energy deregulated States including Canada For Electricity and Natural Gas

Empower your energy purchase with Market Timing

Our intelligent feature to help answer the age-old question, "is now a good time to buy?"

As a consumer, we would all love to be able to purchase in the energy market just before it goes up, as well as to get out of the contract right when the markets go below the purchase price. But can you really beat the market and predict the best times to purchase?

To help you make the ideal choice at the ideal time, we offer Market Timing. It's a sophisticated alert system built to be your expert market analyst that is constantly working to help you determine the most optimal time to purchase energy.

Created by a robust group of brilliant minds, this powerful feature is available to all our customers. Our system uses a gradient boosted trees model that currently has an 88% accuracy and is constantly improving.

How does it work?

Our Market Timing algorithm continually scans the market as a whole, taking into account current energy rates from all supplier partners, and how they change day after day. The system compares these rates with 10 years of historic data to see trends, and uses an intelligent forecast model to determine the best day to start or renew an energy contract.

For New Contracts

If you are a new customer, we use Market Timing to see if today is the ideal day to buy your energy, or if choosing a different effective date would help get you the best rate possible.

For Current Contracts

When your current contract approaches renewal, our Market Timing system will send out an email alert when there is over a 97% chance of that given day being the best opportunity to find the most optimal price for that contract.

LAYERED ENERGY HEDGING

Overview of Layered Hedging Service

The goal of this partnership is to provide long-term, secure electricity supply while maximizing budget certainty and cost transparency. We are uniquely positioned, through our Market Timing alerts, to execute an electric procurement strategy that enables a fully transparent and cost-effective wholesale buying strategy communicated through a dedicated Energy Advisor.

We set market timing alerts to trigger when optimal pricing is found or if there is a need to lock in a % of the load for risk protection purposes. We can layer the hedges with any amount of flexibility to obtain the best results. For example, If we see a price increase for the next 6 months, we can hedge 50% of the load for the next 6 months as protection.

To that end, we will provide you with access to an Energy Advisor and execute your Electric purchases through our Layered Hedging product. This product comes with our highest level of customer service and support. Our current Layered Hedging customer list includes over 60 customers, which equates to approximately 2,000 Mwh under management annually. The procurement approach should be a well thought out and reasonable approach for a client wishing to strike a balance between price stability, and the low prices often available by utilizing the trigger alerts.

Your buying decisions do not end with a signed contract!

Advisory Service via Strategy Calls

- Dedicated energy advisor
- Eyes always on the market

Layering / Price Triggers

- · Strategic, gradual buying
- Defensive & offensive buying

Market Intelligence

- · Price trend analysis
- Market & regulatory monitoring

Reporting & Analysis

- Daily market fundamental email
- · Position tracking
- · Price projections & budgeting
- Risk measurement / trigger status

We Build Sustainable Commercial Electricity

Generate Off Grid Electricity

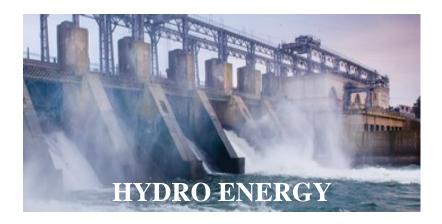

Learn how we build off grid electricity power sub-stations for commercial users that need sustainable power without the local electric utility. Unplug from your local electricity utility company and go off the grid with sustainable power sub-stations that provide all the electricity your business needs. From Solar, Wind, Hydro, Fuel Cell and Natural Gas Turbines we generate electricity for commercial off grid sustainable power.

Thank you for considering Bid On Energy for all your energy needs.

When you're ready, send us your most recent utility bill(s) then our energy experts will review and provide the lowest electricity or natural gas rates for your business.

We will shop most energy suppliers to find the lowest rates for your business.

Email or Fax us your most recent utility bill(s)
