Energy E-Book Guide On How To Save On Energy

Take the guess work out of Energy Procurement!

The future of energy purchasing is here!

Save on what your company spends for electricity and natural gas with Bid on Energy.

Energy costs, whether electricity or natural gas, can be one of your business' greatest expenses. No matter the industry sector you operate in, being able to save on your company's energy costs, empowers your business to run more efficiently, by adding to your bottom line!

Here at Bid on Energy we have created our proprietary technology that will help you reach this goal. Our platform makes electricity and natural gas suppliers compete for your electricity and natural gas business! With over 90 suppliers, our technology, provides your business with a choice of fixed, variable, or time day rates to choose from. We will deliver the most affordable option for your business.

Whether you are a large or small energy user, your business benefits from our experience consultation, technology, notices, and better energy rates too! Unlike most brokers and consultants, via our technology, we provide you with cutting-edge tools and leading strategies, that will help lower your energy costs.

Daily
Market Updates

All Deregulated Energy States & Canada

Our customers benefit from notifications of:

- * Daily Market Updates
- * Capacity Tags
- * Peak Grid Day Alerts
- * Renewal Notices

Daily Market Updates - We track changes in the market, making it possible for you to lock in low energy rates at the optimal time—saving you money each year. We find savings opportunities from private and public energy markets. so you can take advantage of these changes

SAMPLE DATA

Peak Grid Day Alerts - We track your energy usage throughout the year and send you up to 10 notices annually. With these notices you know, what day and time to reduce your energy usage, in order to lower your annual energy consumption

3-5 pm CST

Tuesday, September 1

Lower your electricity usage on **Tuesday**

UP TO 30%

Annual Savings

Lowering your electricity usage on Tuesday could reduce your annual utility bills.

5

Peak Grid Days

We've predicted 5 opportunities to save this season. We'll continue to alert

Renewal Notice - We send emails to let you know when your contract(s) are over, what the rates are at least 3 months before your agreement ends. We work with you to ensure you know when there are low renewal energy rates available.

Your Electricity contract is coming up for renewal in 30 days (03/01/2021).

Henry Hub Natural Gas: 2025 Review & 2026 Outlook

Pricing, Market Drivers, and Lock-In Guidance

Focus: Electricity & Natural Gas Procurement Decisions

Data sources: EIA STEO (Aug 12, 2025), EIA Henry Hub monthly history, EIA storage report

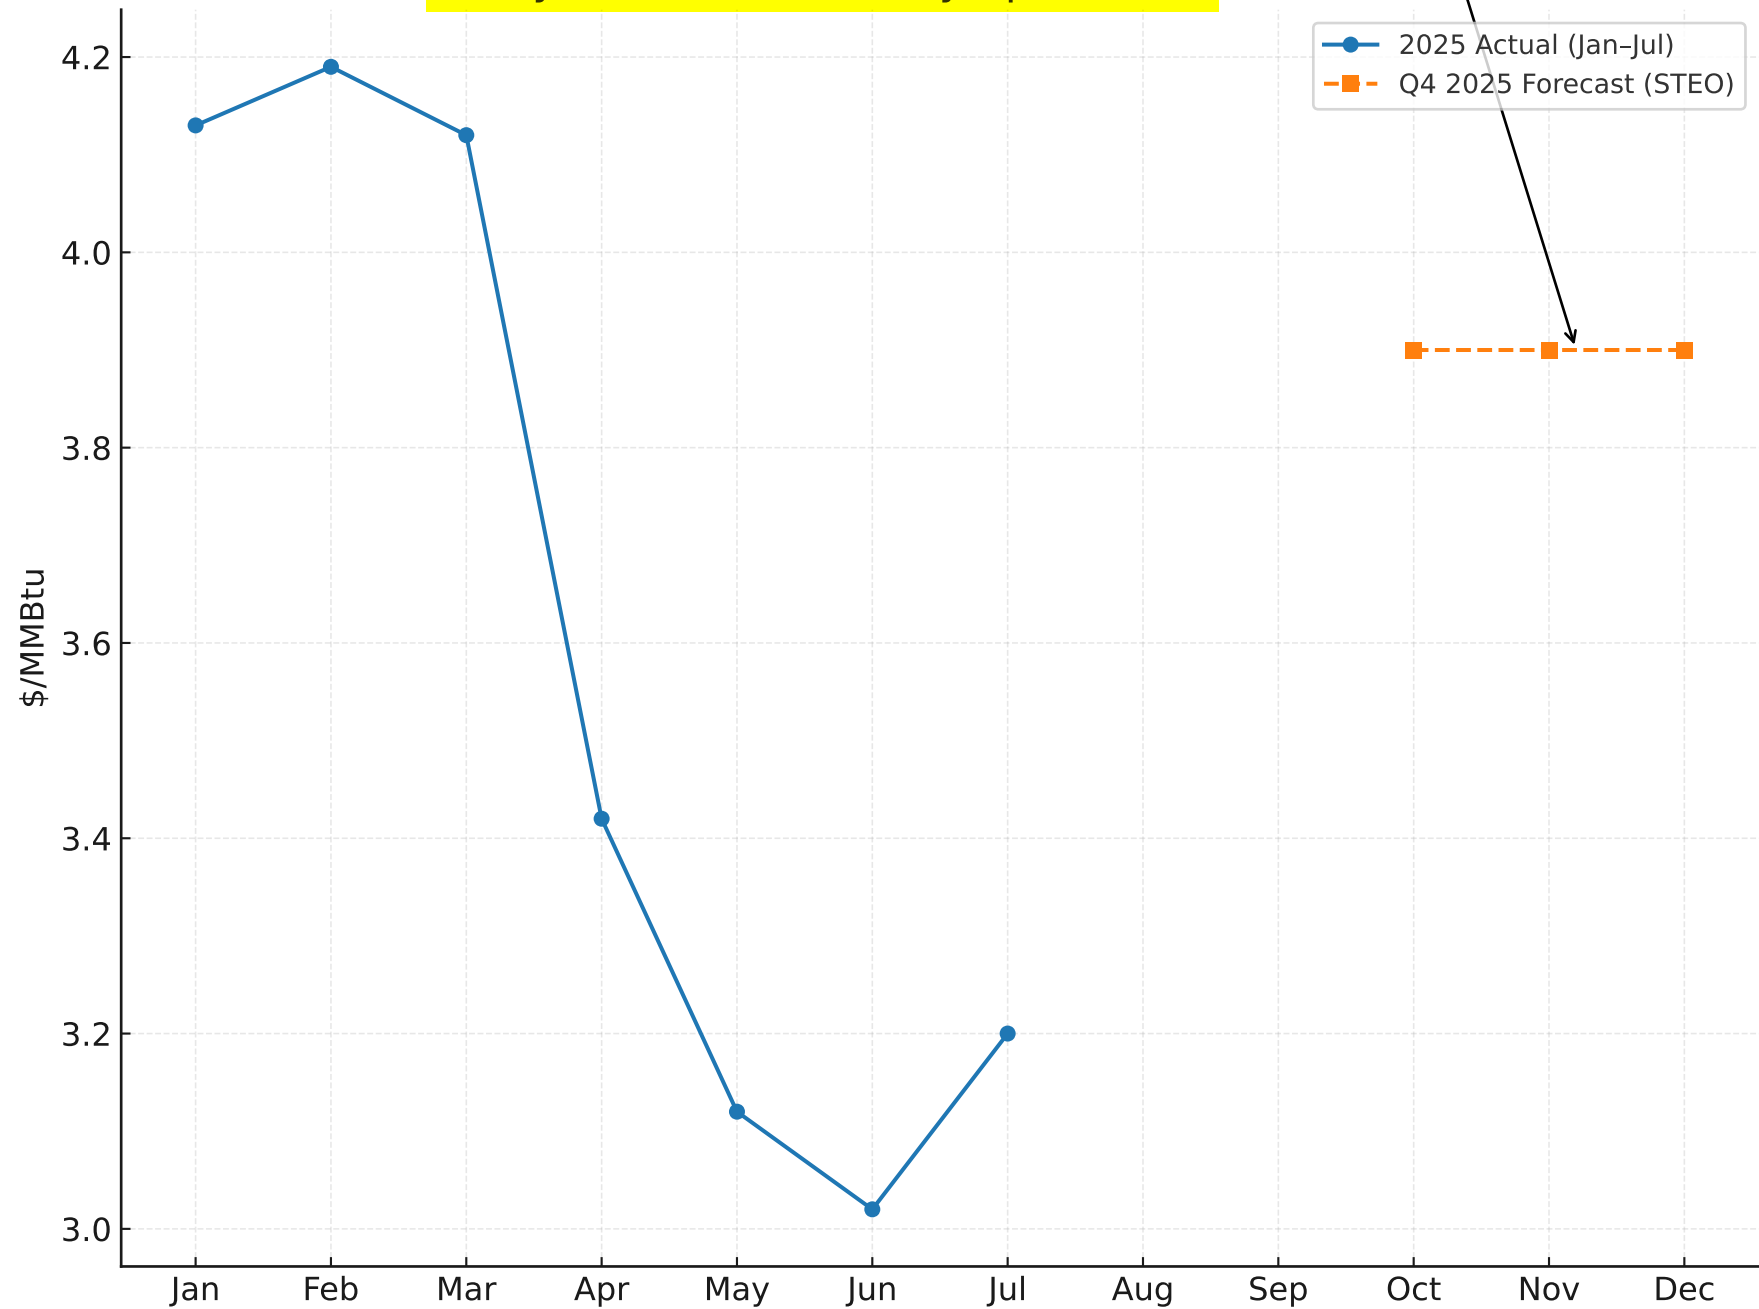

Executive Summary

- 2025 YTD Henry Hub (Jan-Jul) averaged ~3.46 \$/MMBtu; prices eased from ~4.2 in Q1 to ~3.0 in early summer.
- EIA STEO (Aug '25) projects Q4'25 at ~3.90 and 2026 at ~4.30 \$/MMBtu as LNG exports rise and production is flat.
- U.S. working gas in storage: ~3,186 Bcf (Aug 8, 2025) — above the five-year average.
- LNG export growth: 15 Bcf/d in 2025 → 16 Bcf/d in 2026 (EIA STEO).
- Implication: Lock portions on dips/shoulder months via laddered terms (12–36 mo) to reduce timing risk.
- Watch risks: cold snaps, Gulf outages, LNG facility downtime, power-burn swings.

Henry Hub 2025 Monthly Spot Prices (\$/MMBtu)

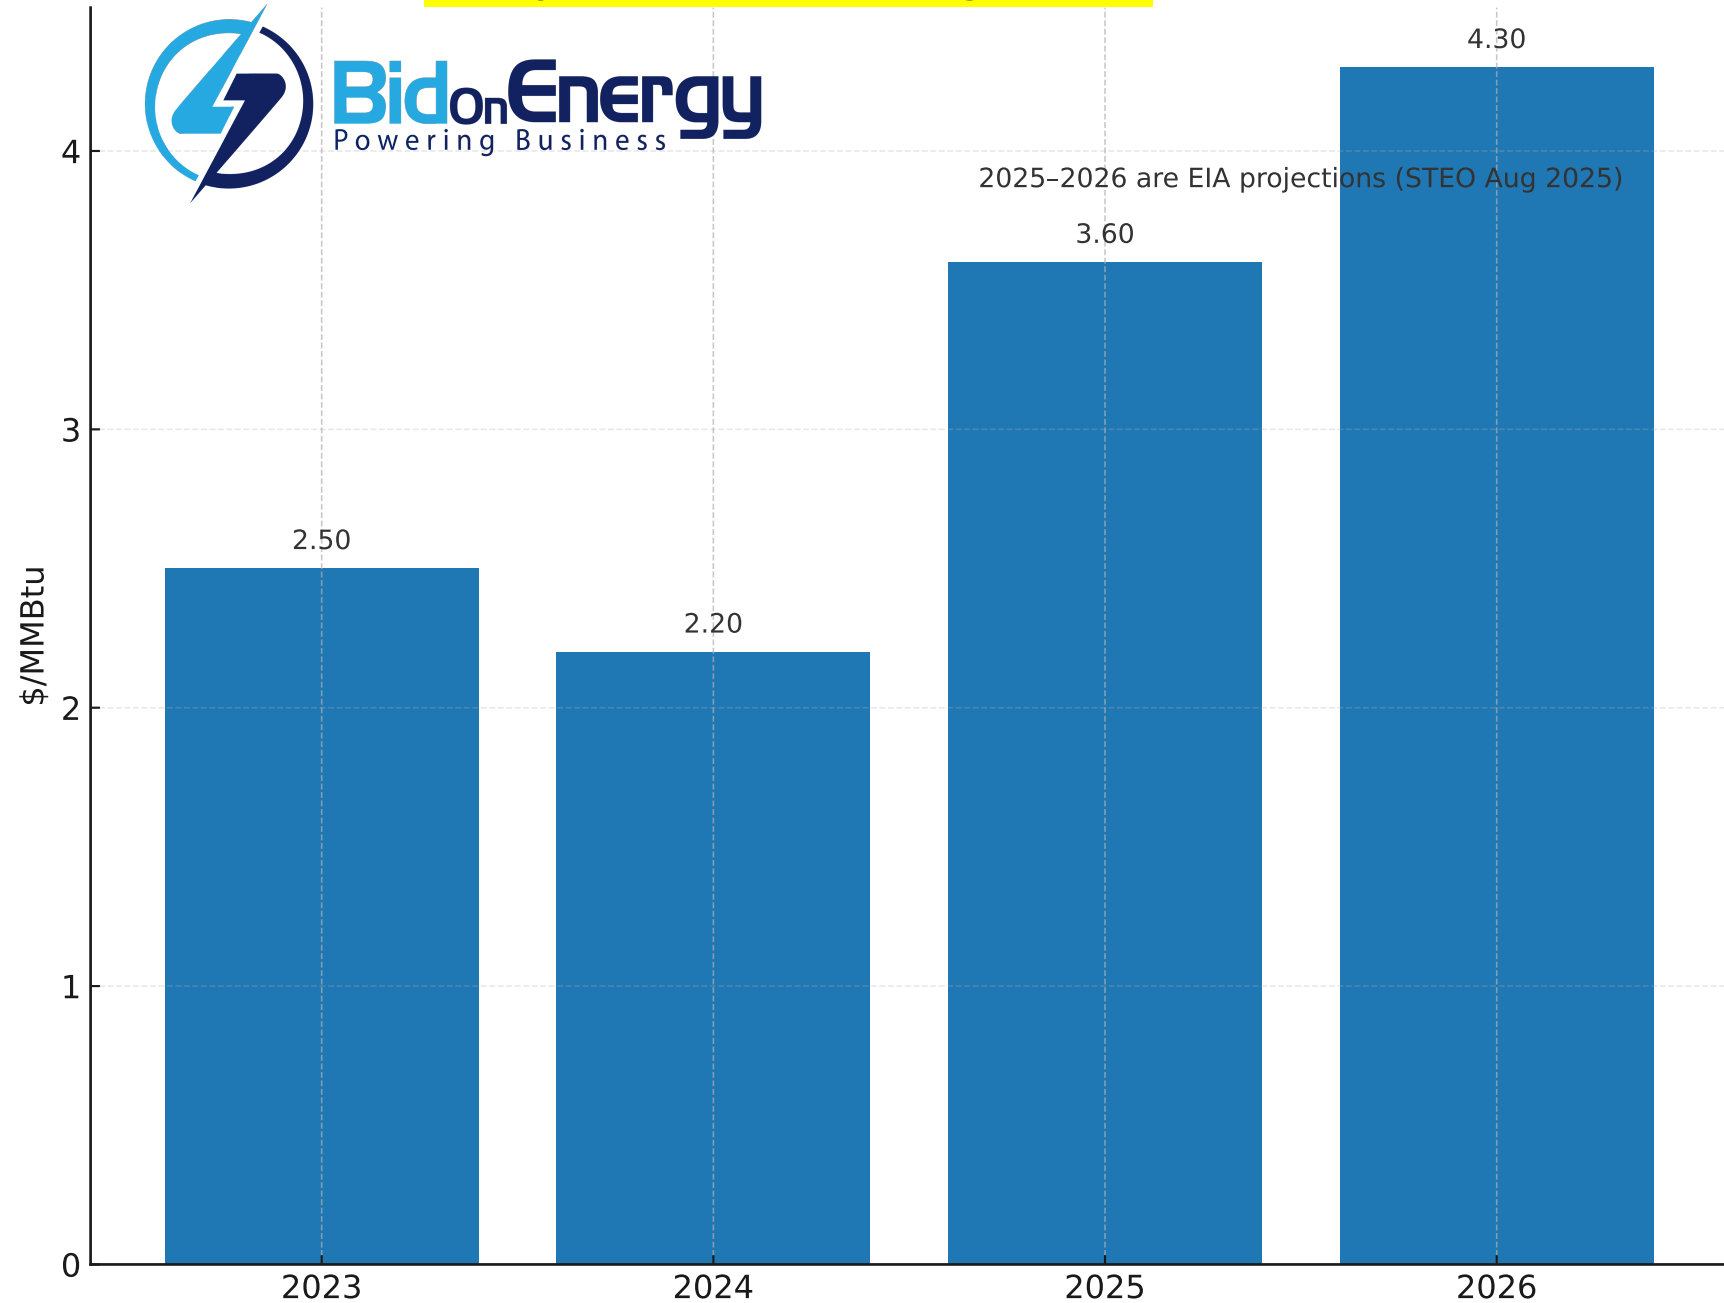

EIA STEO Q4'25 avg $\approx$ \$3.90

Henry Hub Annual Average Prices (\$/MMBtu)

Bid on Energy
Powering Business

Lock-In Playbook (2025-2026)

Strategy:

- Ladder fixed-price blocks: e.g., 25–30% now, 25% in shoulder season (Sep–Oct), 25% before winter, remainder opportunistically.
- Term mix: Blend 12, 24, and 36-month agreements to average into 2025–2027 exposure.
- Use price triggers: pre-authorize execution if prompt month trades at or below a target (e.g., <\$3.20/MMBtu).
- Consider collars or index adder structures if you need some upside participation with downside protection.
- Align volumes with weather-normalized usage; avoid over-hedging peak days.

Market checkpoints:

- EIA storage (Thurs 10:30 ET): bigger-than-expected builds with high inventories tend to soften prices.
- LNG feedgas & facility status: new trains ramping or outages move basis and Henry Hub levels.
- Production & power burn: flat output + strong summer power demand tightens balances.
- Weather & storms: early cold or Gulf hurricanes can spike risk premia—finish hedges before these windows.

When to lock:

- After bearish storage surprises, during mild-weather shoulder months, or when the forward strip backwardates vs winter.
- If your budget is sensitive, complete >70% of winter 2025–26 coverage by late October 2025.

Notes & Sources:

- Prices: EIA Henry Hub monthly history (through Jul 2025).
- Forecast: EIA STEO (Aug 12, 2025): Q4'25 $\approx$ 3.90; 2026avg $\approx$ 4.30. Storage (Aug 8, 2025): $\sim$ 3,186 Bcf.

Utility Supply Rates by State — Residential & Commercial (¢/kWh)

INSTANTLY COMPARE MOST ENERGY SUPPLIERS
GOTO BID ON ENERGY

Next Steps to Take Control of Your Energy Costs

**** Review your latest utility bills**, then use Bid On Energy's Electricity or Natural Gas Calculators to analyze usage trends.**

Compare live supplier rates across all deregulated markets - get instant, AI-optimized quotes tailored to your usage.

Time your procurement strategically - spring or early fall tends to offer the best pricing; for 2025, we're seeing unusually low contract rates.

Connect with the AI Energy BOT to get personalized recommendations instantly.
